Objective

Computer Science student with a focus on full-stack web development, Flutter mobile apps, and UI/UX design. I build clean, user-centric interfaces backed by well-structured APIs and enjoy working across the stack — solo or as part of a team.

Education

Vellore Institute of Technology (VIT), Chennai	2024 – Present
B.Tech in Computer Science Engineering	CGPA: 8.12/10

Technical Skills

Languages: C, C++, Java, Python, JavaScript, TypeScript, Dart

Web & Mobile: React.js, Node.js, Express.js, Flask, FastAPI, Flutter, HTML, CSS

Databases: PostgreSQL, SQLAlchemy, Prisma ORM, Supabase (PostgreSQL + PostGIS)

Tools & Platforms: Git, VS Code, Docker, Figma, Render

Experience

Billing System Developer Intern	Mar 2025 – Jul 2025
<i>GeoPacific Solutions, Chennai</i>	GitHub
- Contributed to a billing and payment tracking system as part of a collaborative development team. - Assisted in backend development using Node.js and PostgreSQL for data management and storage. - Participated in designing flexible data structures to support multiple product types in billing workflows.	

Projects

Student Dashboard & Management System	GitHub
<i>React.js, TypeScript, Node.js, Express.js, PostgreSQL, Prisma ORM, Tailwind CSS</i>	
A full-stack academic dashboard that unifies VTOP and LMS data into a single interface, covering attendance tracking, CGPA/GPA calculations, and semester-wise breakdowns. It includes planning tools such as an assignment tracker, markdown notes editor, task manager, file management module, and a calendar and timetable system for visualising academic events and class schedules.	

Landroid — AI Land Monitoring System	GitHub
<i>Flutter, FastAPI, Python, Supabase, PostgreSQL, PostGIS, GeoTIFF, NDVI</i>	
A Flutter + FastAPI application for AI-powered land health monitoring that processes GeoTIFF orthomosaic drone imagery to generate NDVI-based plant health maps and insights. It supports consultant and landowner roles with parcel management, and uses Supabase (PostgreSQL + PostGIS) for spatial data, documents, and user management.	

Expense Tracker	Live — GitHub
<i>Python, Flask, PostgreSQL, SQLAlchemy, JavaScript, Chart.js, HTML/CSS, Render</i>	
A full-stack multi-user expense tracker with secure login, natural language expense input, and a 4-tab dashboard (Overview, Expenses, Budget, Reports) visualised with Chart.js. It includes a smart savings planner that analyses spending patterns and recommends category-level cuts to help users reach financial goals.	

Krypt — Secure Password Manager	GitHub
<i>Python, Flask, PostgreSQL, AES-256-GCM, Argon2id, JWT, TOTP, pytest, Docker</i>	
A self-hosted password manager with zero-knowledge architecture where the encryption key is derived from the master password at runtime and never stored, using AES-256-GCM with unique IVs, Argon2id key derivation, JWT with refresh token rotation, TOTP 2FA, and account lockout. It achieves 93% test coverage across 96 tests covering unit, integration, and security scenarios including SQL injection, auth bypass, and user isolation.	

Interests

Full-Stack Development, Mobile App Development, UI/UX Design, Debugging & Problem Solving, Physics
